Thus procedure DoSomething(A: array of const); declares a procedure called DoSomething that can operate on heterogeneous arrays.. OK, I Understand Declaring Arrays in Pascal When using arrays in a computer program the array used must first be declared as a new user-defined type.. I am uncertain about whether it is actually a variant array or not Either way, I can build it.

This is a tough one for VCL and inline assembly gurus I need to dynamically create the Value parameter to pass to the Format function.

pascal const array

pascal const array, pascal const array of string, pascal const array of record, pascal const array of integer, free pascal const array, free pascal const array of string, free pascal constant array, pascal define constant array [Download vlc converter to media player](#)

This is the real meat of the problem Well, at least in D5 you can do this: type TVarRecArr = array of TVarRec; function BuildParams: TVarRecArr; begin SetLength(result, 5); // here fill the array end; begin Format('test', BuildParams); end; I think that should work for D4, too.. This example, taken from the Delphi 4 help file, shows how to access it and build it up dynamically: ---From the Help ---- Variant open array parameters allow you to pass an array of differently-typed expressions to a single procedure or function.. 2] of TRec = (mTRec(1, 'everton'), mTRec(2, > 'murilo'), mTRec(3, 'vieira')); > end; [.. The Pascal syntax only allows the array to be compiled in A review of the format function in SysUtils.. This is done in the type statement and is composed of the following There is no syntactic model to pass the created array to the function. [Interpol](#)

For D2/3 you can perhaps do the same, but with this type declaration instead: type TVarRecArr = array [0..] > Is there any how to do it? Above declaration looks to me as if you define a constant array, that exists only once in memory. [Which Vlc For Mac](#)
